METHODOLOGY

COMPANY

Boostrial is a company standing out given its innovative spirit in providing differentiated collaborative consultancy services, with the fullest involvement. It offers global solutions to companies manufacturing and distributing industrial vehicles, and the systems and components of the above, devoted to road transport of goods in a global market environment.

We add value and capacities transforming potential into opportunities

MISSION

Boostrial has the mission of driving industrial and commercial activities of companies dedicated to the design, manufacturing and distribution of industrial vehicles, spare parts and components, generating high added-value for on-road and off-road goods transport.

VISION

The Vision at **Boostrial** consists of developing projects to advance new business areas, diversify products or broaden markets, through product reengineering (new designs, new materials, etc.), reengineering of processes (advanced production and local integration techniques, at the destination or mixed, etc.) and logistics reengineering (from CBU to CKD mode).

VALUES

The main goal of **Boostrial** is listening to clients and satisfying their needs, offering optimal solutions in line with requirements. The company combines the advantage of a professional team which is multidisciplinary, highly-qualified and experienced (over 25 years' experience in the sector) together with flexibility and the potential to work where and when required by clients.

SERVICE LINES

Boostrial provides services to the various functional departments of clients (Engineering, Sales Department, Logistics, etc.), acting as a Shared Services Centre to provide the highest effectiveness, efficiency and competitiveness, and to enable access to any geographical areas and facilitate business in a global market.

The extensive knowledge accrued by **Boostrial** in the industrial vehicles sector, including motor and trailer vehicles for road transport, stands us in good stead to identify the best-suited needs and solutions, including partial and global solutions.

SUPPORT

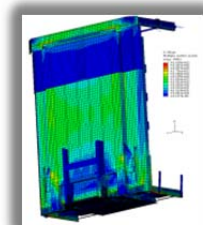

Action Force for commercial and technical support of companies, products and services in a wide range of geographical environments.

PRODUCTS

We provide collaborative consultancy on the development and market launch of new products, systems and services, tailored to requirements and final destinations.

- Design and computation (CAD, FEM)
- Parametrisation and configuration
- R&D+i projects
- Standardisation

PROCESSES

We offer collaborative consultancy for new production system design and commissioning, suited to a variety of purposes and environments.

- Optimisation of the production process
- Lean Production Techniques
- Tooling design

ORGANISATION

We provide collaborative consulting for the implementation of business management systems (ERP), document management (PDM, PLM), and industrial organisation.

- Design and structuring of areas
- Integrated global company management systems
- Specific department management systems (engineering)

LOGISTICS

We supply collaborative consulting for the implementation of improved logistics systems to reach any part of the world in perfect and competitive conditions.

- CKD – SKD – MKD – CBU techniques
- Logistics Integration and Consolidation
- Internationalisation of procurement

ITCs

This service improves the use of new tools and technologies for the distribution of products and services using new communication channels.

- CRM Systems
- e-Marketing
- e-Business

POST SALES

We generate documentary support for assistance delivered by the Post Sales Department to the equipment's client-user to ensure easy maintenance, repair and identification of spare parts.

- Interactive catalogues
- Documentary support
- e-Business

Our comprehensive knowledge of business processes assists us in revealing and prioritising opportunities to gain a constant advantage for products and services

PRODUCT LINES

From the easiest of components to the most complex vehicles, **Boostrial** manages client needs to find an effective, efficient and competitive route to the best operating solution. The range of products offered by **Boostrial** covers any market requirements, tailored to the applicable regulatory framework, including the exclusive ad hoc development of special applications.

VEHICLES, Types

- ↳ MOTOR VEHICLE APPLICATIONS (CHASSIS-CAB)
- ↳ TRAILERS
- ↳ SEMI-TRAILERS
 - Trailer configuration
 - B-Train configuration
 - Full Trailer configuration
